General description & specifications

The HR-28 enclosure is a high-performance passive full range, with an excellent power-size ratio. It consists of two 8" carbon fiber cone transducers and a 1" high frequency compression driver. It offers a wide dispersion of 90° x 60° and 126 dB SPL (1000W program).

This enclosure offers a selectable operation between bi-amp or passive mode and is ideal for a wide variety of applications.

Although this cabinet can be used without a processor, we strongly recommend that the cabinet presets are applied for maximum optimization and performance.

For Low Frequency reinforcement, several subwoofer options are available.
